CleanCity AI

Smart Waste Management & Civic Issue Resolution Platform

Team: ⚡ **Tech Titan** | Abhishek Meena

• SLIDE 02 • PROBLEM STATEMENT

The Crisis We Face

Urban waste management is failing cities worldwide

Overflowing Garbage

Bins overflow before collection, leading to unhygienic and hazardous conditions in urban areas.

Delayed Resolution

Complaint resolution takes days or weeks with no transparency, frustrating citizens.

Poor Coordination

Lack of real-time communication between citizens and municipal authorities creates critical gaps.

Health & Environmental Risks

Uncollected waste spreads disease, pollutes water, and degrades environmental quality.

• SLIDE 03 • PROPOSED SOLUTION

How CleanCity AI Works

A seamless, AI-powered pipeline from complaint to resolution

1

Citizens upload an image with description & GPS location

2

AI analyzes issue severity & auto-classifies priority level

3

Admin receives a prioritized, organized complaint dashboard

4

Citizens get real-time tracking & resolution notifications

• SLIDE 04 • SYSTEM WORKFLOW

End-to-End System Flow

From citizen complaint to verified resolution

• SLIDE 05 • TECHNOLOGY STACK

Built With Modern Tech

Robust, scalable, production-ready technologies

FRONTEND

HTML · CSS · JS

Responsive, accessible, fast-loading UI

BACKEND

Node.js · Express.js

High-performance REST API server

DATABASE

MongoDB Atlas

Cloud NoSQL with global scalability

API

Geolocation API

Precise GPS-based issue mapping

AI ENGINE

Priority Classifier

AI-based severity & category detection

DEPLOYMENT

Docker · Render

Containerized cloud deployment

• SLIDE 06 • INNOVATION & UNIQUENESS

What Makes Us Different

Cutting-edge features that set CleanCity AI apart

AI Priority Detection

Machine learning classifies issue urgency automatically, ensuring critical problems get resolved first.

Photo + Location Reporting

Geo-tagged photographic evidence eliminates ambiguity and speeds up verification greatly.

Real-Time Tracking

Citizens monitor live complaint status, building trust and civic accountability.

Analytics Dashboard

Visual insights help admins identify hotspots and optimize resource allocation.

Scalable for Smart Cities

Designed to integrate with existing municipal systems and scale across entire metropolitan areas with minimal configuration and setup.

• SLIDE 07 : EXPECTED IMPACT

The Change We Create

Measurable outcomes for communities and cities

10x

Faster Resolution

AI-prioritization dramatically reduces the time from complaint to action.

100%

Cleaner Cities

Systematic, data-driven waste management leads to consistently cleaner environments.

40%

Resource Optimization

Better municipal resource allocation through predictive analytics and priority routing.

3x

Citizen Participation

Easy reporting and transparent tracking drives unprecedented civic engagement.

• SLIDE 08 • PROJECT ROADMAP

Our Journey Forward

Phased development for maximum impact

Platform **Previews**

Key screens of the CleanCity AI platform

● ● ● cleancity.ai / home

🏠 HOME PAGE

Landing Dashboard

Hero section with live stats, quick report button, and city cleanliness score — citizens can act instantly.

● ● ● cleancity.ai / report

📁 REPORT ISSUE

Issue Submission Form

Photo upload, auto-detected GPS location, category selector, and description field with AI-powered validation.

● ● ● admin.cleancity.ai / dashboard

📊 ADMIN DASHBOARD

Authority Control Panel

Prioritized complaint queue, heatmap of reported zones, resolution stats, and team assignment tools.

● ● ● cleancity.ai / track

⚠️ COMPLAINT TRACKING

Real-Time Status Tracker

Live timeline showing complaint progression — Submitted → Under Review → Assigned → Resolved.
